## **RED digital | REDM digital**

### **Digital spirit levels with Bluetooth interface**

New name, new color, new features: the digital spirit levels from SOLA are showing themselves in a new light. The original ENW series has been renamed RED digital. It has robust profiles and is painted a bright SOLA red. The electronic inclination module has been fitted with a practical Bluetooth interface. This means all products in the RED digital series can be used with the brand-new and free app 'SOLA Measures'.

#### **Digital measurement of inclinations and angles**

The digital spirit levels and digital inclinometers in the RED digital series are ideally suited to measuring inclinations, slopes and angles quickly and precisely. The key feature of the digital spirit level is the integrated electronic inclination module (Solatronic module) with a measurement tolerance of 0.05° at 0° and 90°/0.10° between 1° and 89°. The measuring results can be displayed via the 'Mode' function either in °, mm/m, % or in/ft. The 'Hold' function enables you to 'freeze' the current measured values on the display, while the 'Inc' function enables angles to be transferred easily.

#### **Reversible display and acoustic signal guide**

When taking inverted measurements, the digital display automatically rotates on the module. The permanently backlit display allows the measurement results to be clearly read, even when lighting is poor. In case of unfavorable angles, the acoustic signal guide can be switched on. This makes it easier for measurements to be taken without directly viewing the display and is ideal for tasks where both hands are required.

#### **Bluetooth for SOLA Measures app**

The Bluetooth interface means that the digital spirit levels can be used together with the free 'SOLA Measures' app, giving you access to useful functions. For example, measured values can be transferred to your mobile device in real time and functions on the measuring device can be controlled via the app. Real-time data such as date and time are automatically recorded in the app's clearly arranged measured value memory with each measurement that is taken. It is also possible to upload notes, photos or videos for every measurement and to share these quickly and easily. The user-friendly menu navigation makes the app intuitive and easy to use. Suitable for iOS and Android.

#### **The RED digital series in detail**

The RED digital series comprises one 25-cm inclinometer and two inclination spirit levels measuring 60 cm and 120 cm in length, with patented SOLA FOCUS vials. The magnetic variant REDM digital measures 60 cm in length and is fitted with extra-strong neodymium magnets, which are installed laterally in the profile for precise work. The RED laser digital measures 60 cm and has an integrated laser. It is ideal for transferring measuring points and inclinations.

### About SOLA-Messwerkzeuge GmbH:

Since 1949 the SOLA brand has meant high precision measuring and marking tools. As market leader in premium spirit levels, the Austrian company manufactures a wide range of products, including screeding levels, folding rules, long and short tapes, squares, marking products, laser distance meters and a customized laser program. SOLA's approach is to develop and continuously optimize its products to match its customers' requirements as closely as possible. SOLA Measuring Tools are sold in 70 countries around the world. 75% of all products are manufactured in Götzis, Austria, where the headquarters and production facility are located. This is where 200 employees develop, produce and distribute a product range of more than 1,500 products. The high quality standards that SOLA has set for itself are subjected to constant control in the company's own laboratories and testing facilities. Find out more at [www.sola.at](http://www.sola.at)
